Home of America's Longest Established Annual Bull Sale

Fellow Cattlemen,

Finally, our time is here. The production sector is well positioned moving into the next phase of marketplace. This market is and will be supply driven for a couple of years. The facts are indisputable, there are simply less cows in production, less cattle on feed and a tighter selection of replacement females moving forward. Overwhelming consensus agrees that all classes of cattle will continue to experience increased value.

This is the time to surround yourself with inventory. This is the time to improve genetics. Two reasons … more than ever, there is a distinct difference in value to those cattle that can make the grade or not. Generic black cattle and off colored breeds are being discounted. Why? Two premiums, either cattle grade Prime or be accepted for CAB. Second reason and more important out in the country is maternal prepotency. The national cow herd is built from the Angus cow. In a period and a need for regrowth, the strength of better Angus maternal genetics is in more demand than ever before. The industry will need more, better cows and the Angus female will unquestionably be that choice.

This is absolutely supported by the fact that for the first time in history more than 74% of all harvested cattle were black hided. Although not all Angus, this proves further demand for the predictability of registered Angus genetics. This in turn was further emphasized that for the eleventh year in a row, more than a billion pounds of CAB has been marketed. That's more than 3 million pounds a day

This doesn't happen by accident. Years of careful, selective mating decisions have tremendously improved carcass potential. Our program aims to improve every generation. We have customers reporting 70% CAB acceptance, nearly double the industry average. That's impressive AND profitable Among the sea of black cattle, tie yourself to a program that creates value. Let's, together, help create you more value.

With this invitation, we proudly present our best set of bulls to date. These two-year-olds were developed specifically for this offering and the coming yearling bulls represent our foremost genetics. Please note that the bulls raised on the White Sulphur Springs ranch were managed at altitude and PAP tested for this offering. In addition, we are offering a set of fall-born long yearlings as another option for age advantaged breeding bulls.

We're extremely confident with this offering and certain you will be as well We truly welcome your visit and appreciate your continued support and interest. Consider this your personal invitation to join us on December 1.

The family and crew of Stevenson Angus

Tuesday December 1 2026

1:00 PM MST

Sale Day Phone
(406) 423-7500

Sale Location
Sale held at the Home Ranch,
350 JRS Lane, 1.5 miles south of Hobson.

Sale Order
Bulls will sell in lot order: Older Bulls Lots 1-124,
Fall Bulls Lots 151-171, Bull Calves Lots 201-338.

Auctioneers
Joe Goggins and Roger Jacobs

Sight Unseen Purchase Guarantee
Sale Day Phone - (406) 423-7500. Buyers unable to attend the sale may call or send their bids to any of the Representatives listed or directly to Stevenson Angus. We provide a complete satisfaction guarantee for cattle purchased in this manner. When cattle purchased "sight unseen" are delivered, the buyer can inspect the cattle. If they are not as represented, simply put them back on our truck.

Announcements
Announcements from the auction block take precedence over any printed material.

Inspection of Cattle
Our cattle are available for inspection at the Ranch any time.

Herd Health
All cattle sell with proper interstate shipment health papers.
Lance Hughes, DVM, Resident Veterinarian (406) 350-8381

Delivery
See our bull delivery policy on page 6. For all cattle purchased over the phone, or via the internet, Stevenson Angus will be in contact following the sale to arrange delivery. Full payment required before delivery of cattle.

How do you Ballyhoo?
With this catalog and so much more!

Let's Talk $Values

If you retain your own replacements, $M is a crucial figure to consider. It serves as a comprehensive metric for evaluating cowherd longevity, efficiency, and maternal strength.

A higher $M means a bull's daughters are more likely to:

- Breed up on time
- Raise a good calf each year
- Stay sound and functional longer
- Cost less to maintain (reduced cow size, fewer issues)

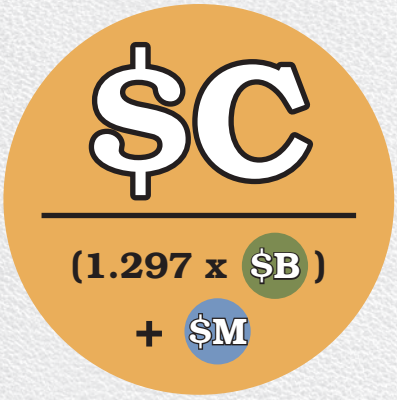

Over time, this translates to more profitable, lower-maintenance cows in your herd.

If you retain ownership, sell calves on the grid, or market reputation feeder cattle, $B is a powerful terminal tool. It summarizes how your calves perform where it really counts — on the scale and on the rail.

A higher $B means that, on average, a bull's calves will:

- Gain faster in the feedlot
- Eat less per pound of gain
- Grade better (more Choice and Prime)
- Yield more usable pounds of beef

That means more post-weaning value per calf — particularly if you retain ownership to the rail.

$C is the most balanced, big-picture index Angus provides. Use it to find bulls that deliver maternal dependability and terminal value — especially if your operation spans multiple segments of the supply chain.

A high $C bull is likely to sire:

- Daughters that breed early, raise good calves, and last longer
- Steers that gain well, convert feed, and hang valuable carcasses

In other words, $C helps identify bulls that do it all — and help your operation make money in both the pasture and feedyard.

How to Read the Sale Lot Information

Expected Progeny Difference (EPD) is the estimate of how future progeny of each sire are expected to perform in each of the traits listed. EPD is expressed in pounds, either plus or minus. For example, when used on the same cows, calves sired by a bull with a +60 weaning EPD should average 10 pounds more than those sired by a bull with a +50 weaning EPD. EPDs are current as of catalog printing. Updated EPDs can be viewed at www.Angus.org

Targeting the Brand™ logo highlights registered Angus bulls with greater genetic potential to produce calves that meet specifications of the Certified Angus Beef ® brand.

+.41	+.48	+27	+.40	+.44	+1.52	+1.07	44

Index values are expressed in dollars per head

Maternal Weaned Calf Value ($M) predicts profitability differences from conception to weaning. Traits included: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Feedlot Value ($F) an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value ($G) an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value ($B) is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

Combined Value ($C) is an index which includes all traits that make up both $M and $B. EPDs directly influencing a combined index: CED, CEM, WW, YW, Milk, HP (Heifer Pregnancy), DOC, MW, Angle (Foot Angle), Claw (Claw Set), DMI (dry matter intake), Marb, CW, RE, Fat.

Calving Ease Direct (CED) EPD is expressed in percentage of unassisted births, predicting the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth (BW) EPD is a predictor of progeny birth weight attributed to the parent.

Weaning (WW) and **Yearling (YW) EPDS** are predictors of the animal's ability to transmit weaning growth and yearling growth to its progeny.

Scrotal Circumference (SC) EPD, expressed in cm., is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Heifer Pregnancy (HP) EPD is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first–calf heifers during a normal breeding season. A higher EPD is more favorable.

Milk EPD is a predictor of an animal's genetic merit for milk and mothering ability.

Pulmonary Arterial Pressure (PAP) EPD, is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score. PAP score is an indicator of susceptibility to high altitude disease commonly experienced at elevations greater than 5,500 feet.

PAP Score
Pulmonary Arterial Pressure Test Score

Teat Size EPD (Teat) expressed in units of teat size score, with a higher EPD indicating a sire will produce daughters with smaller teat size compared to that of other sires' daughters.

Udder Suspension EPD (Udder) expressed in units of udder suspension score, with a higher EPD indicating a sire will produce daughters with tighter udder suspension compared to that of other sires' daughters.

Docility (Doc) EPD is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility.

Claw Set (Claw) EPD is expressed in units of claw-set score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

Foot Angle (Angle) EPD is expressed in units of foot-angle score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

Marbling (Marb) EPD is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE) EPD,expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Calving Ease Rating (CE)

★★★★ Excellent calving ease, use with confidence on any type of heifers.

★★★ Superior calving ease, should work with most heifers and most situations.

★★ Moderate calving ease, most people will use these bulls on cows, but they can be used on heifers if calving ease is of less concern.

★ We recommend these bulls just for use on cows.

Cattle Delivery

We encourage all of you to stop by and coordinate delivery plans before leaving the Sale. If you are buying off-site, please let us know of any special instructions as soon as you can. Otherwise, we will contact you regarding date of delivery. Your cooperation in taking delivery is greatly appreciated.

Bull Delivery

In order to better service our customers, we offer FREE NATIONWIDE BULL DELIVERY. For the western states we will make every effort to deliver the bulls to your doorstep. For our customers East of the Mississippi River, we ask your cooperation with potential drops at Central Delivery Points.

To our neighbors to the north, we are happy to bring you your bulls, however due to increasing scrutiny at the border, having the Canadian resident present, eases the process. If meeting at the border is not possible, we ask to share in a portion of crossing fees. Thank you for your understanding.

We will continue to offer a pickup credit of $100 per head for all bulls picked up within 7 days of the sale.

First Year Breeding Guarantee

In lieu of a commercial "loss of use" policy, we would like to offer our own First Breeding-year Guarantee. For bulls selling for $8000 or more, and does not complete a full breeding season, we will share in the replacement cost up to 50% of the value of the injured bull. Breeding season is defined as 90 days after turning out the bulls.

50% of the value of the injured bull, minus salvage value, will be given as credit in a future sale or toward a replacement bull if one is available. All injured bulls must be diagnosed by a veterinarian. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2027.

Example 1: A $12,000 bull is injured, a credit of $6,000 minus any salvage value will be given to the buyer.

Example 2: A $10,000 bull is injured, a credit of $5,000 minus any salvage value will be given to the buyer.

Example 3: A $6,000 bull is injured, no credit is given. Buyer retains all salvage value.

Applicable credits honored from our Breeding Guarantee are to be used within one year of submission.

Stevenson Angus Rewards

Loyalty Reward

We honor our customer's loyalty with a 5% discount on every bull purchased by any single customer that has purchased bulls in TWO consecutive sales prior to this offering. In order to qualify, purchases need to have been made from both of our sales from the Fall 2025 and Spring 2026 offerings.

PATHWAY TO PROGRESS

WHERE YOU GAIN **THE ADVANTAGE**

SET YOUR PRIORITIES

Look for the **Powered by Angus**® logo to find registered Angus genetics backed by a pedigree with trusted EPDs and $Values to meet your specific breeding objectives.

SELECT WITH CONFIDENCE

Accelerate your progress toward your priorities by using tools that help build confidence in selection and mating decisions.

GeneMax® Advantage™ is a genomic test with individual trait reporting and economic indexes — the only commercial female test that delivers Angus $Values and Sire Match ™.

Look for the **Targeting the Brand™** logo to identify bulls with a greater genetic potential to sire calves that meet Certified Angus Beef® specifications.

MARKET SMARTLY

Get paid for your genetic investment by marketing your next calf crop with **AngusLink®**.

Showcase your priorities with GeneMax® Advantage™ and Targeting the Brand™ logos inside the **Genetic Merit Scorecard®**.

DRIVE CONSUMER DEMAND

No matter your priorities, consumer demand drives profitability. **Certified Angus Beef®** connects your genetic investment to the quality and consistency consumers trust.

PROGRESS STARTS WITH THE **RIGHT INFORMATION**

Top Ten Older Bulls by Trait in this Offering

Industry Leading Genetics . . .

EPDs as of 10/28/26

Older Bulls

- Never been picked over
- Predominately AI sired and embryo transfer
- Developed specifically for this sale offering
- PAP TESTED

In our experience, these age advantage bulls have proven to cover more country and cover more cows. Feedback from our customers is true testimony to their breeding vigor and ability to hold up better.

PAP TESTED ... the bulls raised at the White Sulphur Springs ranch were managed at altitude and PAP tested for this offering by Dr. Nick Johnson of Sorenson Intermountain Vet. PAP scores are notated for those bulls. For additional information contact Darrell.

They are put into contemporary groups at weaning based upon their ranch origin and the conditions they were raised under. These contemporaries remain the same through their yearling performance test. Understand, because the bulls are in different contemporary groups, a ratio of 100 will not necessarily correlate to the same weight between the different groups. These bulls are then slow grown, fully concerned with their long-term ability to hold up. They are sound, athletic and not over conditioned.

These bulls are guaranteed breeders. They have all passed a breeding soundness evaluation including a semen test.

Selling 100% possession and semen interest for every bull.

HD50K VIDEO

High Mountain Disease, or commonly known as Brisket Disease, is a common condition seen in cattle raised in regions greater than 5,000 ft of elevation. The disease is characterized by ventral edema in the brisket region that is caused by high blood pressure in the lungs and right sided heart failure. Cattle mortality from this disease can result in the loss of 3% to 5% of the calf crop but has been reported to be as high as 25% and morbidity greater than 40%. Historically, Brisket Disease has been a problem of higher altitude environments but recent evidence has shown that cattle at much lower elevations are being affected, particularly in the high plains feedlots. All breeds can be affected and often times animals will be "sub-clinical", meaning that they do not show outward signs of being ill but will not grow or produce like they should.

Through PAP (Pulmonary Arterial Pressure) Testing, we can determine an individual animal's potential to develop Brisket Disease and because High Mountain Disease is moderately heritable in the Angus breed, we can evaluate that animal's potential to pass on genetic traits that can greatly influence the performance of that animal's offspring. The PAP test can be influenced by several factors other than genetics but because it is an actual measurement, it is far more accurate and reliable than the current EPD that is being used making yearling PAP the most common phenotype used to determine if cattle are tolerant to high altitude production systems.

A crucial component to the PAP test being more reliable and accurate than the EPD is that cattle are tested at the appropriate age and elevation. It is important that cattle being tested are at least 12 months of age when the test is performed and that those animals have resided over 5500 feet of elevation for at least 30 days. The higher in elevation that the animals reside, the greater the confidence we have in our PAP testing data.

- Dr. Nick Johnson

ST Genetics 2026 National Beef Tour.

Fall Bulls

Our commitment to offering age advantaged bulls has been unwavering for 66 years. To complement our older coming two-year-olds, we chose to develop a smaller group of fall born long yearlings. In our experience, a little extra age has proven these bulls to cover more country and cover more cows. Customer demand and feedback for these older bulls has been tremendous.

These fall born bulls are all born, raised and developed in Hobson. They have all passed a breeding soundness evaluation including a semen test.

Selling 100% possession and semen interest for every bull.

Bull Calves

The bull calves offered in this Fall Sale are the top end of the natural and embryo calves out of mature cows born at Stevenson Angus in January and February.

These calves were all born and raised in Central Montana near Hobson. After weaning, the calves are fed a high roughage growing ration. These bull calves were weaned and weighed from September 8th - 9th.

These bulls are members of large contemporary groups within the Stevenson Angus herd. Because they are grouped by growing conditions, a ratio of 100 will not necessarily correlate to the same weight between the different groups.

While these bulls are guaranteed breeders, we recommend that bulls not wintered at Stevenson Angus be fertility tested by a certified veterinarian prior to use next summer.

Selling 100% possession and semen interest for every bull.

Wintering Arrangements

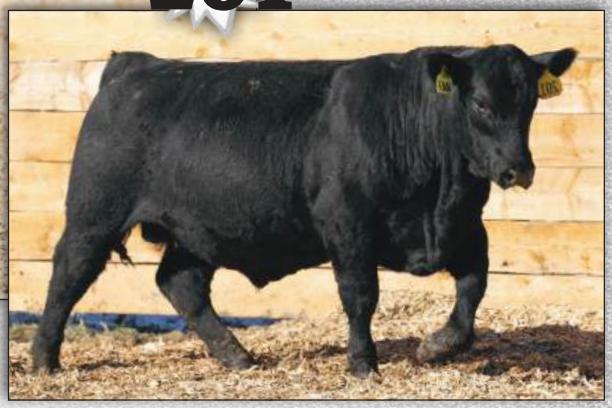

Wintering arrangements are available on bull calves purchased in the sale. For $500 per head, they will be wintered and delivered after our March bull sale. Wintered bulls will have yearling data collected and recorded to AHIR. They will also pass a complete breeding soundness evaluation, including semen test, prior to delivery in the spring.

All weaning weights were taken September 8 – 9, 2026

American Angus Association in Chile for the Montana Ag Trade Mission.

DATA Driven HERD
AHIR
COMMITTED TO DATA COLLECTION

The Data Driven Herd program recognizes American Angus Association® members committed to the collection and submission of data on multiple traits to AHIR® to help better characterize phenotypes in both their herd and the Angus breed.

Participating herds collect a minimum of 8 to 12 traits of their choosing on a corresponding percentage of their herd and submit the data annually to AHIR to earn Bronze, Silver or Gold level recognition.

Scan to learn more about the program or head to qrco.de/DataDrivenHerdinfo

MAKE YOUR CATTLE STAND OUT

You've made a significant investment in your genetics, but does the market recognize that? Stand out by differentiating our cattle with AngusLink℠ programs: the Genetic Merit Scorecard℠ and AngusVerified℠.

ANGUSLINK℠
GENETIC MERIT SCORECARD℠

The Genetic Merit Scorecard gives buyers the confidence they need to pay more for your quality calves.

ANGUS VERIFIED℠

AngusVerified validates your calves are sired by registered Angus bulls and make your cattle stand apart from other black hides on sale day.

Users of AngusLink programs earn **$13-15/CWT PREMIUMS** on average. Give us a call, and learn how to claim your competitive edge with AngusLink value-added programs.

ANGUSLINK℠
VALUE ADDED PROGRAMS

ANGUSLINK.COM | 816-383-5100

The Genetic Merit Scorecard and AngusVerified are administered by IMI Global.

STEVENSON

WORLD CLASS BEEF

Five generations of family ranching
producing the **highest quality beef**.

Angus cattle originated in Scotland, as did our family roots.
For more than eight decades, our family has believed in
our ability to make a living in the beautiful,
but often harsh ranch land of central Montana.
Carrying on the tradition, each new generation of family
adds invaluable experiences that improve
your family dining experience.

Why us?

> For generations, our sole livelihood has been from providing seedstock Angus cattle and genetics from our family ranch to the world. We love the beef industry and are excited to offer our world class cuts of beef to the market.

Over 100 years ago

> The Stevenson family moved from Missouri to the small town of Hobson, Montana to discover our legacy as Angus ranchers.
>
> Originally, crops, cream, eggs, custom harvest work and a flock of turkeys were our main source of income. By the mid-40s, we introduced bigger livestock into the mix and purchased cattle. Ultimately, we found our true calling after purchasing four registered Angus heifers from the Airyland Ranch, Montana's pioneer Angus herds in nearby Lewistown. Five generations later, we sell our seedstock cattle and genetics all over the world producing the highest quality of beef worldwide.

For your dining experience at home . . .
